

① / 2020
: Trie - (mostly used in searching)

A type of pattern from a array of string/
dictionary, or is there an word
starting with that pattern.

→ ["help", "hello"]
is an word starting with "he" exists:

insert "help"

"helpo" \downarrow $O(N)$

Search

$O(N)$

Q - Longest string with all PREFIXES 2020 (2)

$[K, Kir, Kira]$ \rightarrow words

output \rightarrow Kira

at the time of insertion

Count the flags in path.

String with max flags

Flags = size(words[i]) - 1

insert(K) \rightarrow 0, insert(Ki) \rightarrow 1

Ki - flag = true

insert(Kir) \rightarrow 2

Kir - flag = true

insert(Kira) \rightarrow 3

Kira - flag = true

insert(Kiran) \rightarrow 4

Kiran - flag = true

max from hence

[] - flag = true

[Kiran]

Longest string with

by character
& if not
exists
increase
the
count.

8 Ans $TC(N^2)$ $SC(26 * N)$

Minimum XOR Value $\rightarrow \{9, 5, 3\}$

Pair

$$9 \wedge 5 \rightarrow 12$$

$$5 \wedge 3 \rightarrow 6$$

$$9 \wedge 3 \rightarrow 10$$

let put $\rightarrow (6)$

App 1: $i=0 \rightarrow i=n$
 $j=i+1 \rightarrow j=n$ } $O(n^2)$ (11/2020)

App 2: sort & check all adjacent's

App 3: Time = $O(N)$

Note how to check i^{th} bit is set or not \rightarrow

$(num \& (1 \ll i))$

So, for min xor we have to try to take same bit as then same bit will result in 0.

(9, 3, 5) insert(9)

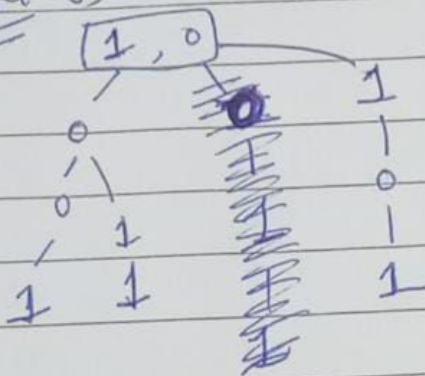

when 3

insert

check for

same bit

Path so, $9 \wedge 3 \rightarrow 10$

Note for max xor go on different bit path

then try to insert 5 (0101)

so

so it will move on 3's path.

⑤ 0101, ③ 0011

bits are same

ERD The Power of Innovation

3 ^ 5 -> 6

8, 1, 2, 12, 7, 6

Insert $\rightarrow 8$

1) PREFIX $\rightarrow 8$ } MAX-8
 $[8]$

2) PREFIX $\rightarrow 9$ } MAX-9
 $[8, 1]$

3) PR $\rightarrow 11$ } MAX-11
 $[8, 1, 2]$

MAXIMUM SUBARRAY XOR

[5]

TRY LC $\rightarrow 1707, 1803$

5) PR $\rightarrow 0$ } MAX (11, 15)
 $[8, 1, 2, 12, 7]$ $\rightarrow 15$

MAX XOR with 0 \rightarrow PREFIX

0000
1011 $\rightarrow 11$

4) PR $\rightarrow 7$ } MAX-15
 $[8, 1, 2, 12]$

MAX XOR

$[0111]$

PR
 \downarrow
7

\downarrow 1000
1111 $\rightarrow 15$

So Remove 8 will give XOR-15
 $[8] \wedge [8, 1, 2, 12] \rightarrow [1, 2, 12]$

6) PR $\rightarrow 6$ } MAX (15, 15)
 $6 \leftarrow 0110$
 $1001 \rightarrow 9$ $\rightarrow 15$
 MAX XOR $\rightarrow 9 \wedge 6 \Rightarrow 15$
